BRAZED ALUMINUM CONSTRUCTION

Performance Notes

- Bar and plate brazed aluminum core
- Provides the best heat transfer per given envelope size while minimizing pressure drop
- Air-side fin design minimizes fouling and static pressure ensuring long-term, reliable performance
- Welded fittings/ports and manifolds ensure structural integrity
- Standard SAE ports – NPT & BSPP available
- Customized units are available to meet your OE specific performance requirements
- T-BAR core optional for high viscosity oils or other highly fouling fluids. (See T-BAR Performance Curve)
- Optional internal temperature controlled bypass (T-BAR)

Materials

Mounting Feet Steel

Standard Core BRAZED ALUMINUM CONSTRUCTION

- Bar and plate brazed aluminum bar and plate
- Tanks – 5052 Aluminum
- Nose Bar & Little Bar – 3003-H Aluminum
- Air Fin, Plate, Turbulator & End Plate – 3003-O Aluminum

Connectors Aluminum

Fan Aluminum Hub, Plastic Blades

Shroud Steel

Motor TEFC & IEC

Fluid Compatibility

Petroleum/mineral oils
Oil/water emulsion
Water/ethylene glycol

Ratings

Maximum Operating Pressure
250 PSI (17 BAR)

Maximum Operating Temperature
300°F (150°C)

How to Order

Specify Motor Required
2 - Single Phase
3 - Three Phase
6 - 575V Three Phase
9 - Hydraulic
18 - IEC Three Phase
C - Core Only
0 - No Motor

Core Blank - Standard P-BAR
TB - T-BAR Core**

Noise Level Blank - Standard Noise Level
LN - Low Noise Level***

Connection Type
1 - NPT
2 - SAE
3 - BSPP

Bypass* Blank - No Bypass
Pressure bypass only (P-BAR and T-BAR Cores)
25 - 25 PSI (1.7 BAR)
60 - 60 PSI (4.1 BAR)
Thermal/pressure relief bypass with temperature rating of 140°F (60°C)
(T-BAR Core only)
29 - 29 PSI (2.0 BAR)
87 - 87 PSI (6.0 BAR)
130 - 130 PSI (9.0 BAR)

Specify Motor Required
2 - Single Phase
3 - Three Phase
6 - 575V Three Phase
9 - Hydraulic
18 - IEC Three Phase
C - Core Only
0 - No Motor

Core Blank - Standard P-BAR
TB - T-BAR Core**

Noise Level Blank - Standard Noise Level
LN - Low Noise Level***

Connection Type
1 - NPT
2 - SAE
3 - BSPP

Bypass* Blank - No Bypass
Pressure bypass only (P-BAR and T-BAR Cores)
25 - 25 PSI (1.7 BAR)
60 - 60 PSI (4.1 BAR)
Thermal/pressure relief bypass with temperature rating of 140°F (60°C)
(T-BAR Core only)
29 - 29 PSI (2.0 BAR)
87 - 87 PSI (6.0 BAR)
130 - 130 PSI (9.0 BAR)

* BOL-4 is not offered with bypass.
** This is a partial flow pressure bypass only. It is not designed to be a full flow system bypass.
*** T-BAR core option provides a T-BAR core in a BOL frame. Used for high fouling or high viscosity fluids. Performance is typically 15-25% less than the P-BAR Core. Consult Factory for details.
**** Available in models 8-2000 only, the low noise option is done by lowering the fan speed. As a result, the performance will be reduced by approximately one model size.

</table>

Notes: Maximum Pressure is 2000 PSI. Stated Minimum Operating Pressure is at Inlet Port of Motor. 1000 PSI Allowable Back Pressure.
Selection Procedure

STEP 1  **Determine Heat Load.** Typical application, size cooler for 1/3 of the input horsepower. Heat load may be expressed as either Horsepower or BTU/HR or KW/°C.

\[ \text{HP} = \text{BTU/HR} ÷ 2545 \]
\[ \text{BTU/HR} = \text{HP} \times 2545 \]
\[ \text{KW} = \text{HP} \times 0.745 \]

STEP 2  **Determine Entering Temperature Difference.**

(Actual ETD)

\[ \text{ETD} = \text{Entering oil temperature} - \text{Entering Ambient air temperature} \]

The entering oil temperature is generally the maximum desired system oil temperature.

Entering air temperature is the highest Ambient Air temperature the application will see.

STEP 3  **Determine the Corrected Heat Dissipation to use the Curves**

**ENGLISH Version**

\[ \text{Heat Rejection} = \text{Heat Load} \times \frac{100^\circ \text{F}}{\text{Desired ETD}} \]

(BTU/HR) to use with selection chart

STEP 4  **Select Model From Curves** Enter the Performance Curves at the bottom with the GPM oil flow and proceed upward to the adjusted Heat Rejection from Step 3. Any Model or Curve on or above this point will meet these conditions.

STEP 5  **Calculate Oil Pressure Drop** Find the oil pressure drop correction factor and multiply it by the Oil Pressure Drop found on performance curve.

Listed Performance Curves are based on:

- 50 SSU (11 cSt) oil
- 100°F (55.56°C) Entering Temperature Difference (ETD)

*If your application conditions are different, then continue with the selection procedure.*

**Oil Temperature**

Typical operating temperature ranges are:

- Hydraulic Motor Oil 120°F - 180°F (49°C - 82.2°C)
- Hydrostatic Drive Oil 160°F - 180°F (71°C - 82.2°C)
- Engine Lube Oil 180°F - 200°F (82.2°C - 93.3°C)
- Automatic Transmission Fluid 200°F - 300°F (93.3°C - 149°C)

**Desired Reservoir Temperature**

**Oil Temperature:** Oil coolers can be selected using entering or leaving oil temperatures.

**Off-Line Recirculation Cooling Loop:** Desired reservoir temperature is the oil temperature entering the cooler.

**Return Line Cooling:** Desired reservoir temperature is the oil temperature leaving the cooler. In this case, the oil temperature change must be determined so that the actual oil entering temperature can be found. Calculate the oil temperature change (oil \( \Delta T \)) with this formula:

\[ \text{Oil } \Delta T = \frac{\text{BTU's/HR}}{\text{GPM Oil Flow} \times 210} \]

To calculate the oil entering temperature to the cooler, use this formula:

\[ \text{Oil Entering Temp.} = \text{Oil Leaving Temp.} + \text{Oil } \Delta T \]

**Oil Pressure Drop:** Most systems can tolerate a pressure drop through the heat exchanger of 20 to 30 PSI. Excessive pressure drop should be avoided. Care should be taken to limit pressure drop to 5 PSI or less for case drain applications where high back pressure may damage the pump shaft seals.

**Pressure Drop**

![Pressure Drop Graph](image-url)
Performance Curves

BOL Models with Standard P-BAR Core

Note: Derate heat rejection values 15% if using 50 HZ motors.
Performance Curves

BOL Models with Optional T-BAR Core

Note: Derate heat rejection values 15% if using 50 HZ motors.
Performance Curves

BOL Models with Low-Noise Option

The low noise option offers the BOL models with a reduced motor speed. This allows a lower sound level output for noise-sensitive applications.

Available on 60 HZ Nema frame only.
