MF Series - Mobile Air Cooled Copper Tube/ Aluminum Fin with DC or Hydraulic Fan Drive Cooler

The Mobile MF Cooler is based off of the M Series cores with the addition of a low amp draw DC motor or long-life hydraulic motor. The robust and rugged design includes steel manifold, copper tubes, and aluminum fins. Other features include an optional serviceable built-in internal pressure bypass for cold start-up protection and the use of high-low turbulators for optimal heat rejection at lower flow rates. This series is ideal for higher pressure applications. Common applications include oil, fuel and transmission cooling.

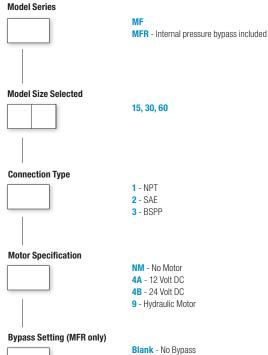

For additional sizing information consider using TTP's XSelector® online sizing Program. *

Options Fan control switch Serviceable internal pressure bypass

How to Order

Features

Heavy duty construction Eliminate piping, reduce cost with optional internal pressure bypass **SAE or NPT connections**

Mounting brackets included

Ratings

Maximum Operating Pressure 300 PSI

Maximum Operating Temperature 350°F

Heat Rejection up to 20 HP (15 KW) Oil Flow up to 150 GPM (330 LPM)

Internal Pressure Bypass Options

Available in either 30 PSI or 60 PSI settings. **Removable for Service**

This is a partial flow pressure bypass only. It is not designed to be a full flow system bypass

Rugged steel manifolds 3/8" copper tube size Aluminum fins Low ampdraw 12 or 24 volt DC motor Long life hydraulic motors

Hydraulic Motor:

Hydraulic Motor Displacement 22in³/Rev

Maximum Hydraulic Motor Pressure 2000 PSI

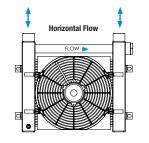

Maximum Allowable Hydraulic Motor Back Pressure 1000 PSI

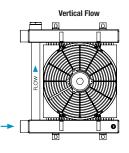

MFR-15

3/4" external, all steel valve.

MFR-30. MFR-60 11/2" external, all steel valve

Recommended Port Orientation

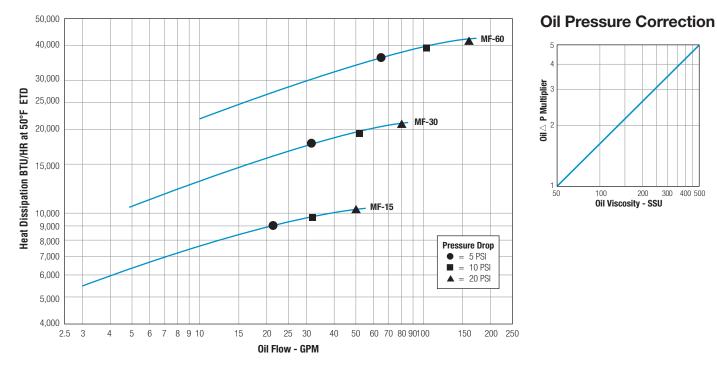

Inlet

Performance Curves

For additional sizing information consider using TTP's XSelector® online sizing Program.*

Selection Procedure

C_v Viscosity Correction

Performance Curves are based on 50 SSU oil entering the cooler 50°F higher than the ambient air temperature used for cooling. This is referred to as a 50°F ETD

- STEP 1 Determine the Heat Load. Heat load may be expressed as either horsepower or BTU/HR To convert horsepower to BTU/HR: BTU/HR = Horsepower x 2545
- **STEP 2** Determine Entering Temperature Difference. The entering oil temperature is generally the maximum desired oil temperature. Entering oil temperature Ambient air temperature = ETD
- **STEP 3** Determine the Corrected Heat Dissipation to use the curves. Corrected Heat Dissipation = BTU/HR heat load x $\frac{50^{\circ}F \times CV}{ETD}$

STEP 4 Enter curves at oil flow through cooler and curve heat dissipation. Any curve above the intersecting point will work.

STEP 5 Determine Oil Pressure Drop from Curves:

I = 5 PSI n = 10 PSI s = 20 PSI Multiply pressure drop from curve by correction factor found in oil \ge P correction curve.

Oil Temperature

Typical operating temperature ranges are:Hydraulic Motor Oil120°F - 180°FHydrostatic Drive Oil160°F - 180°FEngine Lube Oil180°F - 200°FAutomatic Transmission Fluid200°F - 300°F

		OIL									
Average Oil Temp °F	SAE 5 110 SSU at 100°F 40 SSU at 210°F	SAE 10 150 SSU at 100°F 43 SSU at 210°F	SAE 20 275 SSU at 100°F 50 SSU at 210°F	SAE 30 500 SSU at 100°F 65 SSU at 210°F	SAE 40 750 SSU at 100°F 75 SSU at 210°F						
100	1.14	1.22	1.35	1.58	1.77						
150	1.01	1.05	1.11	1.21	1.31						
200	.99	1.00	1.01	1.08	1.10						
250	.95	.98	.99	1.00	1.00

Thermostatic Temperature Control Option (DC)

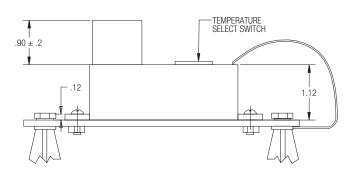

This controller was designed to mount on the cooler without requiring extensive wiring or plumbing. It provides accurate temperature control by cycling the cooling fan(s) to maintain desired oil temperature.

- n 12 or 24 volt operation
- $\,{}^{}_{\rm n}\,$ Adjustable temperature settings range from 100°F thru 210°F
- $\ ^{\ }$ For use with one or two fan models two fans need additional relay
- ⁿ Temperature sensor provided
- " Wiring provided for remote manual override
- Mounting hardware included
